MANY OTHER STYLE AND SIZES OF TANKS IN STOCK

The AIR INDUCTION ULTRA LO-DRIFT (ULD) spray tip is the ideal tip for use when drift reduction is paramount. The tip produces large air-filled droplets, which cut drift dramatically when compared with a standard flat fan or other low drift spray tips.

Ideal for PRE-EMERGENCE AND BROAD SPECTRUM PRODUCTS

- Wide spray angle (120°) enables lower boom height to further decrease drift.
- Small, compact size reduces the chances of accidental breakage.
- Engineered for superior spray uniformity at all pressures (15-115 psi).
- Operates at standard boom pressures and distribution.
- Large air inlets eliminate the chance of blocking and uneven spray patterns.
- ISO Standard colors and sizing ensure that the ULD fits all standard caps and Twin Cap
- Available as standard tip and as convenient FastCap for safer handling.

ULTRA LO-DRIFT SPRAY NOZZLES 1.5 - 8 IN STOCK

DID YOU KNOW?

SPRAY TIPS DO NOT LAST FOREVER!

There is sufficient evidence that spray tips may be the most neglected component in agriculture today. Even in countries with obligatory sprayer testing, spray tips are the most significant failure, even though they are among the most critical of items in proper application of valuable agricultural chemicals.

For example, a 10 percent over-application of chemical on a twice-sprayed 1000 acre farm could represent a loss of \$2,000-\$10,000 based on today's chemical investments of \$10-\$50 per acre. Also, this does not take into account potential crop damage.

Check your spray tips frequently for wear or clogging and replace on a regular basis. Also, do not neglect your strainers, hoses, pump capacity and pressures.

Wako trained personnel are here to assist with your questions.
